How to set up DynDNS service with GlobeSurfer

1. Go to http://www.dyndns.com

2. Create a new account. Follow the instructions.

3. After e-mail confirming the account go back and log in.

4. Go to Dynamic DNS

5. Click Create Host

6. Choose a name and a domain (in the list) for the GlobeSurfer

7. Don’t bother about the other fields.

8. Click “Add Host”
7. Start GlobeSurfer and log on to the GUI

8. Connect GlobeSurfer to the Internet.

GlobeSurfer now has a DNS name.

9. Click Advanced

And then Dynamic DNS

10. Chose “Add connection”

Fill in Dynamic DNS account name and password.

Type the hostname that you created above.

11. Click OK

12. Connect GlobeSurfer to the Internet.
13. If you check back with [www.dyndns.com](http://www.dyndns.com) you will see that the DNS record has been updated.

14. If you check back with [www.dyndns.com](http://www.dyndns.com) you will see that the DNS record has been updated.

15. If you have port forward services on port 82 and 83 in GlobeSurfer you should be able to reach them on:
